*"Skilled Producers of Copper & Brass Tubing"*

## WELDING APPLICATION TUBING

### PRODUCTS:

<b>TYPE</b>	<b>ALLOY</b>
Deoxidized, High Phos (DHP) Copper	C12200
Red Brass—85%	C23000
Yellow Brass—70%	C26000
Low Leaded Brass	C33000
Copper-Nickel—30%	C71500

### APPLICATIONS:

Welding tips, acetylene torch nozzles, torch handles, diffusers, and other fabricated or machined parts for welding applications.

### FORMS:

MIG tip material in 12 foot straight lengths or level wound coils, and Brasses and copper-nickels in straight lengths from 0.150" long.

### SHAPES:

Round, oval OD/round ID, fluted OD /round ID, oval OD with flutes/round ID, square, rectangle, and others.

### CORE COMPETENCIES:

Precision drawing (sizing), straightening, and cutting to length,  
Square and deburred tube ends,  
Product incising available (if required),  
NDE testing of tube (eddy current).

### CERTIFICATIONS / ACCREDITATIONS:

ISO 9001:2015-certified quality management system,  
ISO 17025-accredited testing laboratory.

**Examples of How our Tubing is Used**

**TYPES OF PACKAGING FOR WELDING APPLICATION TUBING:**

**All-Wood Boxes:**

- Used for straight length tubing over 38" in length,
- Boxes have 2"x4" runners on their bottom to provide forklift and strap access,
- Typical boxes weights of 400-800 lbs.,

**Bundle Pack:**

- Available for direct shipments to the customer (no LTL's) and only for hard drawn temper material,
- Material is secured with steel banding in a bundle form,
- Primary benefits include the elimination of packaging material which reduces costs and eliminates dunnage at the customer's facility.

**Level Wound Coils:**

- Coils with 36" OD x 24" ID x 4" or 6" widths,
- Bulk-packed, on cardboard reels, or on plywood reels,
- If plywood reels, coils can be placed horizontally or vertically on pallet,
- Coil weights up to about 250 lbs. depending on tube dimensions,
- Shrink-wrapped (see photo) or encased in cardboard.
